

MINEUM Q&A

V1 – 06 May 2016

What is MINEUM?

MINEUM is a mining farm located in Quebec, Canada that is led by two cryptocurrency enthusiast and developers. The company is aimed at stable growth over many years to come and poised to become the reference in cryptocurrency mining.

Who created MINEUM?

MINEUM has been created by two Quebecers, Anthony Rail and Martin Dubé

What is an ICO?

ICO is the abbreviation for Initial Coin Offering.

Why have you chosen this time to hold the ICO?

According to the actual trend, we decided to launch now in order to be able to mine the next big coins, which will be available in the next few months. By holding the ICO later in the summer, we could miss a lot of great mining opportunities. Plus, we wanted to release many features by the end of 2017 and if possible, before Bitcoin halving, since a lot of people will join the crypto world during this period. We want to attract as many people as possible with our services.

Is there a place I can get an entire overview of the mineum project?

An entire overview of the MINEUM project is available in the whitepaper we released at: <https://mineum.org/documentation/mineum-whitepaper.pdf>

Is there a place where I can get an entire understanding of the MINEUM Token?

Many files are available at <https://mineum.org/documentation.php> to allow you to understand the main principles of MINEUM. For specific questions, you can contact us by email, social media or directly on our Slack Channel.

How is this project going to be different than other mining projects?

MINEUM is unique and simply not comparable to any other projects currently available in the crypto world. Since the beginning of development we had in mind that MINEUM must be innovative and this is what we did. We worked hard to deliver some great features from launch and it starts with our ICO platform, followed by our Shareholder platform to be released at the end of the ICO period.

MINEUM is something completely new. It represents the opportunity to own shares (in the form of tokens in your own wallet) in a cryptocurrency mining farm where you'll receive the profits.

What will the funds be used for when donations are raised?

The funds will be used, with due diligence, to expand mining activities and start the development of many new features announced.

Am I guaranteed to make a return from being a shareholder?

If you're holding your tokens in a wallet and you are registered to the shareholder platform, yes, you will be paid dividends. However, as is the case with any project, it is possible that some quarters show a deficit and therefore the small possibility exists that there is not a payout.

What is the difference between a shareholder and a token holder?

A shareholder holds 10 000 MNM or more and has subscribed to the Shareholder Platform (available on MyMINEUM). A token holder holds less than 10 000 MNM. There is also the possibility of only being considered a token holder if one holds more than 10 000 MNM but is not registered on MyMINEUM.

What transparency do you plan on?

As we did for the ICO, we will always act in consideration of our shareholders. To do so, discussions with our community will lead us to make decisions about the different documents they want us to make public to enable maximum transparency.

Can you mine MNM?

Yes! As a mining farm project, we thought that adding a mining phase would be an incredible and very suited feature to be included in the project. 200 thousand blocks will be mineable. A total of 750 thousand MNM will be available during these blocks.
